

TOP TEN REASONS TO BUY A CLAYTON STEAM GENERATOR

7. PACKAGED SYSTEMS

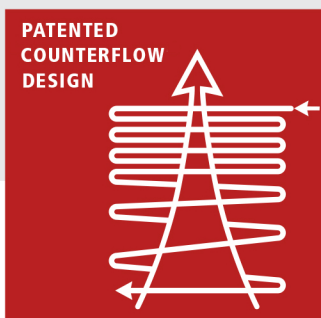

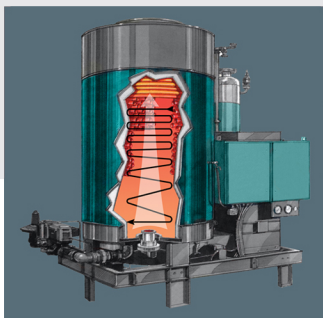

A boiler installation can be a tricky thing. Depending on the complexity of your setup, you're going to have to find a configuration that suits not just your boiler, but all of your other auxiliary equipment. This could include a feedwater system, chemical treatment, and blowdown tanks, and all of that doesn't even account for the piping and electrical options that your installation requires. Without the proper planning, your boiler room can quickly turn into a cluttered mess that is difficult for your employees to navigate and could potentially present a safety hazard.

In order to cut down on the confusion and the expenses, Clayton Industries provides a variety of compact and convenient packaged options, to help provide you with a quick and easy installation. These optional packaged designs place your system components on a skid, which are fully wired and plumbed. These skids are easy to move, come shipped to you preassembled, and further reduce the physical space required in your boiler room by using a common skid.

We offer several different styles when it comes to our packaged systems. These include a complete skid mounting of your generator and feedwater system, as well as other configurations to mount your feed water or condensate system, including chemical treatment, on its own separate skid.

In addition to our skidded packages, we also offer a full Containerized Package. In this configuration, your generator and feedwater system arrive installed in a weather proof enclosure, ideal for situations where renovating your plant is not an option. The package arrives complete with its electrical and plumbing components installed, and your new container can be conveniently installed alongside your plant, providing the steam you need without taking up any space on your factory floor. Our packaged systems come in a variety of standard options, but we also provide custom configurations to best suit the needs of your particular operation.

If you're looking for a simple installation, consider the Packaged Systems from Clayton Industries for a convenient and space saving solution, and skip the clutter.
